Hello,

I am Oscar, an 18-year-old open-source software developer and aspiring IT technician currently studying IT and networking at NTI Gymnasiet Karlstad. My fascination with computers began at the young age of 7 when I got my first computer. Since that day, my curiosity and passion for technology have only grown stronger. It was like opening a door to a world of endless possibilities, and since then, I have experimented and explored all aspects of technology.

Working with computers and technology is not just a hobby for me; it is a lifestyle. Coding and solving problems are exciting challenges that I approach with eagerness and enthusiasm. I enjoy the process of turning ideas into functional programs and finding efficient solutions to technical issues.

In addition to being a passionate individual, I am proud to be an effective team player. My dedication to my studies, combined with my ability to collaborate effectively, makes me an asset in any group project or work environment I find myself in. I have honed my communication and teamwork skills through various group projects, ensuring that we meet our objectives efficiently and creatively.
